

## Did you know?

- Over 500 million laser and inkjet cartridges are consumed each year, less than 25% of these cartridges are recycled.
- Annually the aftermarket imaging supplies industry reclaims over 42,000 tons of empty toner cartridges that otherwise would be sent to landfills.
- Each compatible cartridge that is manufactured saves approximately 1 gallon of oil. This saves 11 million gallons of oil every 6 months.

# The Perfect Toner Cartridge

## Huge Cost Savings From Expensive Genuine Laser Cartridges

### Environmentally Friendly

The remanufactured laser toner we supply uses a combination of new and recycled parts that are designed to conform to the original equipment manufacturer's specifications. One benefit to the environment is to keep up to 5 pounds of waste out of the landfill for each cartridge produced. Another is reducing the need to make new plastic and metal parts for every cartridge consumed by end users. We utilize all three legs of the recycling stool: Reduce, Reuse, Recycle.

### Manufactured in the USA

Our cartridges are produced right here in the United States, many in our home state of Colorado, providing good paying manufacturing jobs. We are proud to display Made in the USA on our toner cartridges.

### Zero Waste Option

We have cartridge return programs available that recycle or reuse every single component, from the box to the toner remnants. You can be assured that we are saving resources before and after you purchase from B2B Direct.

### One Year, No Questions Asked Warranty

All our products are produced in ISO compliant facilities and are guaranteed to perform to your satisfaction.
